# Fanuc Repair & Testing Services

**EAST  
Turnaround**

## Servo Amplifiers

Amplifiers are diagnostically tested within a closed-loop system. This allows us to isolate and uncover faults before replacing ALL defective parts.

Before

After

## Servo Motors

We carefully inspect your motor before performing a full motor refurbishment. Included in this process is a feedback alignment verification and brake replacement if necessary.

## Teach Pendants

Each unit is cleaned and inspected for any external damage to housing. We function test all the cables and connections with engineered testing equipment and provide a closed loop function test on communication ports. All defective parts will be replaced with factory parts.

- Our technicians average over **15 years of experience** in electronics and servo motor repair. Not to mention, we have **5 Fanuc robot systems** in our state-of-the-art facility in Perrysburg, OH. Having robots available in our facility allows us to dynamically test your components in a true simulation.
- We use our diagnostic equipment to replicate plant operating systems and will **NOT** return our parts until they are fully-tested with a simulated load.
- By sending your parts to ACT, we promise that you will receive a competitively priced quote, fast turnaround and a quality repair. Our services are capable of saving customers **up to 50% less than buying new!**
- We understand that when your robots aren't working, your plant isn't either. For that reason, we can provide competitively priced expedited repairs on 1-2 day turnarounds.
