

Sensotek

WHELCO INDUSTRIAL

Whelco Industrial has partnered with Sensotek

Sensotek's wireless condition monitoring solution measures parameters including vibration and temperature, trending critical data points throughout a factory, and relaying that information to the cloud. Real time and historical data is accessed from the web or through a customized mobile app.

Programmed alerts issue a warning at fault levels above a desired baseline. Critical alarms trigger prior to a potential failure or catastrophic event. Compressors, motors, robots and stamping presses are applications that can exhibit bearing defect, mechanical/structural looseness, excessive heat, imbalance and misalignment. Sensotek's rugged sensor and receiver technology can identify trends leading to premature failure and loss of productivity. Protect your valuable production assets and extend asset life with Sensotek's proven technology.

SOME OF THE KEY BENEFITS:

-  Turnkey Solution—Wireless Machine Condition Monitoring
-  Custom Designed for Specific Applications/Machines
-  Data Visualization on Mobile App or Web Interface
-  Data Analysis/Management Capabilities
-  Superior Battery Life—Wireless Sensors (IP69K)
-  Receive Warnings and Alarms on Machine Condition Prior to Unscheduled Downtime
